

3M Approved Installation Tool

The Hot Shot Big Easy is designed to hold either one heat gun in the middle, or two heat guns, one on each side. Use of two heat guns will give you a wider span of vinyl adhesion with each pass.

Notice there are multiple adjustments on the Hot Shot Big Easy (allen wrenches included) which will allow you to fine tune both the heights and widths of your heat source. You will also find adjustment nuts and allen bolts underneath the leather sleeves. It comes adjusted for a standard heat gun nozzle.

-- **CAUTION** -- Where the heat gun attaches to the heat gun mount gets *extremely* hot while in use and remains hot for at least 20 minutes after use. We advise wearing gloves when using this tool.

Note that the heat guns draw a lot of amps so be sure to use a heavy amperage extension cord when operating more than 7 feet from a 110 outlet.
